Abstract (Abstracts are limited to 300 words)		
<p>The purpose of this research is to compare the house with apartment in crime occurrence. The study area was limited to BusanJin-Gu of Busan city which includes Seo-myeon district; the biggest downtown in Busan city. Because BusanJin-Gu is higher crime occurrence more than another region in Busan city. We are using crime occurrence, housing, apartment data in 2005 year. We put spacial analysis in practice by ArcView3.3. As a result, crime occurrence is a house more than high. It means increase a round of inspection in housing region, like cho-lyang dong.</p>
